

LOOKLIVE

Looklive is looking for AI Engineers

Looklive contextualizes popular media with shoppable content

Looklive builds smart technology that identifies products in video and images. We use cutting edge technologies to build our backend, public channels and b2b solutions. Our in-house team of developers is the best in the business and we are growing.

We are working with state-of-the-art object detection and classification technologies in order to qualitatively and quantitatively improve our product identification process. Your role will be to improve existing identification processes, implement new identification strategies and explore new technologies that could further improve accuracy. You should be ambitious and persistent, but also be pragmatic.

We are looking for a **Computer Vision/Machine Learning Engineer**, who:

- Has a Bachelors or Masters degree in AI, Computer Science, Mathematics, Physics or similar
- Is proficient in English (speaking and writing)
- Brings 2+ years of experience as a professional developer
- Has experience with Python and preferably C++
- Has experience with OpenCV
- Has experience with (Convolutional) Neural Networks
- Extra bonus points for experience with Caffe, MATLAB or Numpy

You have:

- A professional attitude to work
- A fun personality
- High quality standards

We offer:

- A great team
- Monthly bbq's
- A competitive salary
